

AIR FILTERS

K&N developed and manufactures the only air filtration system of its kind... a high-flow, washable filter that's been proven, again and again, to be the finest in the world. Professional racers and mechanics worldwide rely on K&N air filters to protect their expensive engines... and so should you!

1. Pleated multi-layered oil impregnated original cotton-glass media.
2. Superwadded felt on outside of filter does not cause any significant airflow restriction up to 50,000 in. (airflow conditions).
3. Sert abrasion on front filter and bearings an additional filter medium.
4. Integral lock washer already and holds off in suspension without clog.
5. Grid woven cotton and bonded wet media grids or synthetic carbon-to-bleach fumalene and direct high velocity airflow into carburetor - in some cases, increasing C.P.M. and H.P.
6. Bonded wet mesh.
7. Strong twisted air.
